TOOLS USED

How this content was made

Prepared by **Nadakudhuru Adithya Vikram**

The videos, Shorts, notes and slides in this folder were made with the tools below. AI helped with writing and coding; every number and answer was calculated and checked by code before it was used.

AI ASSISTANT	**Claude** by Anthropic · model: Claude Opus 5.5 Used through Claude Code to draft scripts, captions and notes, and to write the code for the animations and the answer checks. I chose the topics and the teaching order, and reviewed everything.
ANIMATION & VIDEO	**Remotion** Videos and Shorts built in code, so every motion on screen follows the physics equations.
ANSWER CHECKING	**TypeScript + Vitest** Every number is calculated by code and checked a second way, such as with a simulation, before it is used.
VOICEOVER	**Chatterbox** open source An AI copy of my own voice, made from a short recording of me and run on my own laptop.
MATHS ON SCREEN	**KaTeX** Clear, correctly typeset formulas in the videos and notes.
NOTES & SLIDES	**PDF & Microsoft PowerPoint** Class notes and worksheets as PDFs, and a teacher deck checked in PowerPoint.

My working rule: AI for words, code for numbers. AI speeds up the writing; the physics and maths are always computed and verified by code, so the content stays accurate.
